

STYLE AND FLEXIBILITY

Designed especially for the needs of log construction and other sites with narrow wall structures, Core makes it possible to use glass sliding doors and supplemental fixed windows more diversely than before.

Core is a stylish and practical way to combine an apartment's indoor and outdoor spaces into one flexible solution. The collection also includes a fixed window.

In cases of special measurement needs, contact Profin Oy's sales department

Note! When the height is 2,750 mm or more, transportation must be agreed separately

Wooden structures of pine, alternatively of oak

Frame depth 170 mm

Frame thickness 54 mm, threshold 45 mm

U value

• 2,000 x 2,180 mm = 0.87 W/m²xK

(Size pursuant to the CE marking's requirements)

• 3,000 x 2,300 mm = 0.82 W/m²xK • 4,000 x 2,600 mm = 0.79 W/m²xK **Glazing 3K** Glazing is determined to be in accordance with the site's building regulations

MORE THAN A SLIDING DOOR

FINNISH EXCELLENCE

Profin has over 20 years of experience in manufacturing glass sliding doors in Northern Finland. They are exported annually to over 30 countries.

Finnska is partnering with Profin Oy to deliver high-end doors to North America.

DURABILITY OF WOOD

Profin makes its products of long-lasting, close-grained pine. The other raw material option is oak. Using wood as the raw material means good structural values, be it thermal transfer or decibel values.

PREMIUM QUALITY

Profin's glass sliding door opens your home for broad horizons and a new sense of cosyness with light, space and a view that changes together with the seasons. A glass sliding door efficiently connects indoor and outdoor spaces allowing more diverse use of space.

In addition to their durability and long lifecycle, Profin products are beautiful, technically well-functioning and easy to use.
